THIS IS TOMORROW

DESIGN COMPETITION ON RETHINKING TODAY'S HOUSING

FOUNDATION MIGUEL FISAC

Recommendations on the PDF document

Recommendations on the PDF document (participation)

The participation document, as stated in the competition rules, will be a single file *.pdf whose size will not exceed 10 MB. It can contain all kinds of printable information (text, drawings, diagrams, images, etc.).

The document will be as anonymous as possible:

- Document name: to be named only with the participation motto.
- File properties: as it is very difficult to create an anonymous pdf file (the computer name used for creating the file is always displayed in the properties section), we suggest creating a file with a computer not revealing the entrant's name. In order to check this information, please follow the steps below:

Right-click on the file, go to properties and then details.

How to adapt the file size to the 10 MB limit

Although there are multiple various reasons why the file size exceeds the limit, I will try to list the most common and how to solve the problem. It also depends on the program used to create the PDF file.

- The document is inexplicably big. The problem can be solved in the dialogue box of the PDF creator by choosing the pre-determined setting of **optimised for web display**.
- If it is a document created from scanned documents and its size is over 10 MB. There must be a resolution problem or excessive page size, because an A4 image in .jpg or .jpeg format with a resolution enabling its legibility should not exceed 700 KB.
- The images used have an excessive resolution. A 200 dpi resolution is sufficient for printing, even less for screen display. Therefore, if bigger images have been used, or their resolution has not been controlled, you are likely to be using images with too high resolution. An option is to reduce both image size and resolution with an image editor or control the resolution in the PDF creator dialogue box.

- The document has very complex and detailed plans or graphs slowing down its opening and handling. This can be solved by selecting the option "vector graphics or elements rasterisation" when creating the PDF file.
